

ABSTRACT

Systems and methods are provided for formatting electronic messages from a mobile communication device. An electronic messaging system may be used that is operable to send and receive electronic messages and to redirect electronic messages to and from a mobile communication device that is associated with an electronic messaging account in the electronic messaging system. Upon receiving an electronic message for redirection from the mobile communication device, the electronic messaging system may be operable to identify a message format for the electronic message, reformat the electronic message using the identified message format, and redirect the reformatted message for delivery. The identified message format may be used for both electronic messages sent from the mobile communication device and for electronic messages sent from a desktop client associated with the electronic messaging account.
